

EEG IN THE ICU

1-DAY COURSE - PROGRAMME

There is growing interest and evidence that EEG is able to predict treatment and outcome in people on intensive care units. This course will discuss the practical use of EEG in the ICU – from recording and basic interpretation to the diagnosis of status epilepticus, assessment of acute brain injury, prognostication after cardiac arrest, and the clinical application of processed and quantitative EEG.

This course is aimed at intensivists and intensive care nurses.

Austin Court, 80 Cambridge
Street, Birmingham, B1 2NP

On Thursday, 11th March 2027
9.15am – 5.00pm

Registration fee: £55
